

IT Infrastructure

Wired and wireless infrastructure services delivering you efficiencies and savings, maximising return on investment

To remain competitive in today's market place a robust corporate communications infrastructure has to offer optimum efficiency at a minimal cost to ensure you and your customers enjoy maximum return on investment.

To assist our clients in achieving this goal Imerja provides a complete end to end portfolio of services to ensure the smooth roll out of your infrastructure project, from an initial network assessment and gap analysis to ITIL compliant SLA based network management services.

Imerja works closely with its customers to plan each infrastructure project in detail. Our highly experienced engineers are knowledgeable in the latest technology ensuring that the advice and specifications offered are based on the customer's business needs and budget and not influenced by manufacturer preference.

Imerja's technical specialists are expert professionals with proven track records in the design and implementation of innovative, complex and cost effective secure network solutions delivered on budget and on time.

To ensure effective implementation and integration a dedicated project team is assigned to an implementation from start to finish under the guidance of an experienced project manager who is empowered to resolve any issues without delay.

Whether you are building an infrastructure from scratch or redesigning an existing infrastructure Imerja will help to identify security vulnerabilities, network efficiencies and develop scalable and secure solutions on best practice models.

Imerja's network, assessment, design, installation and integration services enable the smooth migration from an existing infrastructure to a new solution with minimum downtime and maximum support.

analysis of network requirements

detailed solution design

implementation & configuration

testing & commissioning services

maintenance & support

24x7 managed services

bespoke SLA driven services

**We see IT from
your perspective**

Imerja provides national coverage with engineers based from permanent office locations supported by a network of home based engineers and regional equipment stores offering immediate access to equipment.

Alternatively, Imerja can provide review and validation services on your own network design, verifying the design functionality against the feature sets available on your preferred hardware platforms and software solutions.

If there are alternate approaches to the network design that could benefit you, such as enhanced feature set or new standards compliance, Imerja will be able to make appropriate recommendations ensuring the most effective deployment is achieved.

“We see Imerja as a trusted partner to help us maintain forward momentum in the development of our customers’ IT infrastructure – which is critical in supporting the drive towards realising the national agenda for modernisation and providing value for money.”
